SIDDHARTH

Backend Java Developer

Greater Noida, UP, India | +91-9368217462 | gautamsiddharth131004@gmail.com
LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Backend Java Developer with hands-on experience building secure, containerized REST APIs using Java, Spring Boot, Spring Security, and Spring Data JPA. Skilled in JWT authentication with role-based access control, relational database design with PostgreSQL and MySQL, Docker-based deployment, and third-party API integration. Strong foundation in Data Structures and Algorithms and Object-Oriented Programming.

EDUCATION

B.Tech, Computer Science and Engineering 2022 – 2026
Gautam Buddha University, Greater Noida **CGPA: 8.34/10**

TECHNICAL SKILLS

Languages: Java, SQL, Python

Backend: Spring Boot, Spring Security, Spring Data JPA (Hibernate), REST API Development, JWT Authentication, Role-Based Access Control

Databases: PostgreSQL, MySQL

Tools & DevOps: Docker, CI/CD, Git, GitHub, Postman, ReadyAPI, IntelliJ IDEA

Core CS: Data Structures and Algorithms (250+ LeetCode problems solved), Object-Oriented Programming

PROJECTS

Fitness Tracker – Spring Boot REST API GitHub

Tech: Java, Spring Boot, Spring Security, JWT, Spring Data JPA, PostgreSQL, Docker

- Built a RESTful backend for fitness activity management with JWT-based authentication and role-based access control, restricting endpoints by user role.
- Designed PostgreSQL entity relationships and queries with Spring Data JPA, and deployed the application with a production database configuration.
- Containerized the application with Docker and set up a CI/CD pipeline for automated builds and consistent deployments.
- Tested 15+ API endpoints with Postman and ReadyAPI, covering authentication flows, CRUD operations, security checks, and edge cases.

Smart Agriculture System – AgriPro Live Demo

Tech: Java, Spring Boot, REST APIs, ESP32 (IoT), Weather API, Email Notifications

- Built an IoT-enabled agriculture platform that ingests real-time soil moisture, temperature, and humidity readings from ESP32 sensors and combines them with Weather API data.
- Designed REST endpoints for sensor data ingestion and retrieval with input validation, structured error handling, and pagination for historical sensor data.
- Implemented a tri-state irrigation alert system (OK / WARNING / CRITICAL) that sends automated email notifications, with cooldown logic to prevent repeated alerts.

Smart Email Reply Generator GitHub

Tech: Java, Spring Boot, REST API, External AI API Integration

- Built a Spring Boot service with a REST endpoint that generates email replies as structured JSON responses through an external AI API.
- Implemented request validation and error handling for stable, predictable communication with third-party APIs.

CERTIFICATIONS

- Java Spring Boot Full Stack eCommerce Project Masterclass – Udemy (April 2026)
- Java with Data Structures & Algorithms – PW Skills
